Steel Elements

CORRUGATED SHEETS	
I3-A ColdformEC3_Ind	Strength and stability verification under normal and fire conditions of thin corrugated steel elements of class III, with protected or unprotected sections. Automatic creation of load capacity tables of resting and continuous elements. Languages: English and Italian.

Sandwich Panels

SANDWICH PANELS	
I5-B Sandwich_C-Ind	Resistance verification under normal conditions of monolithic insulated panels made of steel, stainless steel, aluminium or copper with a cold-bent section having flat or slightly profiled faces or having one flat and one profiled face, simply resting or continuous over several spans for roofs or walls. Automatic creation of load capacity tables for resting and continuous elements. Languages: English and Italian.
SANDWICH PANELS + TEST	
I5-C Sandwich_C-Ind-Test	Resistance verification under normal conditions of monolithic insulated panels made of steel, stainless steel, aluminium or copper with a cold-bent section having flat or slightly profiled faces or having one flat and one profiled face, simply resting or continuous over several spans for roofs or walls. Automatic creation of load capacity tables for resting and

	continuous elements. Allows processing of data coming from tests to automatically define parameters for longitudinal shear verification. Languages: English and Italian.

Steel-concrete composite elements

CORRUGATED STEEL SHEETS WITH CONCRETE SLAB + TEST	
I6-B ColdFormEC4-Ind-Test	Calculation under both normal and fire conditions, at U.L.S. and S.L.S., of reinforced concrete slabs on corrugated steel sheet. Verification performed both in the initial phase (non-collaborating casting) and in the final phase (collaborating casting). Allows calculation of longitudinal shear resistance factors ("m-k" method and "partial interaction" method) based on experimental results. Automatic creation of load capacity tables. Languages: English and Italian.
